Methodology

What the tracker shows

One square is one link between a norm, a way of putting it into practice, and an EU instrument, institution or partnership. The tracker holds 196 links across the 11 norms and 91 items. An item that contributes to several norms appears once for each. [Placeholder: one sentence on how to read colours and areas.]

Source

The content comes from the Interface report on how the EU operationalizes the UN framework of responsible state behavior in cyberspace. Read the report. [Placeholder: who coded the links, and when.]

How links are coded

norm_id, title	The 11 norms (A–K).
operationalization	How the norm is put into practice, as described in the report.
entity	The EU legislation, policy, institution or partnership that contributes. Name variants are merged.
type	Legislation, Policies, Institutions or Partnerships.
topic (primary, secondary)	The issue the link addresses: 7 topics.
job (primary, secondary)	The professional group the link matters most for: 5 categories, or “Not specified”.

Data preparation

- 100 name variants of items were merged into 91 items (for example ENISA and its long form).
- Typos, encoding errors and one inconsistent topic label were corrected.
- Norm E has no job category in the source and shows as “Not specified”.
- Two links labelled “Institutions and Partnerships” were assigned the type the same item has elsewhere.
- Every change is listed in the cleaning log below.

Limits

[Placeholder: what the tracker does not show, such as implementation quality, national measures, or developments after the report.]

Download data

The data behind the tracker, free to reuse. [Placeholder: licence and citation.]
